FINISH CHARACTERISTICS CD

TWO-PART POLYURETHANE VARNISHES

Polyurethane coatings form a very resistant film with the help of cross-linked (glycerophthalic) saturated polyesters and acrylic resins. Polyurethane is known worldwide as a high quality finishing varnish. Full spectrum of finishes: mirror-like, high gloss, dull matte or anything in between- polyurethanes can meet any expectations of even the most demanding customers at low cost and minimal effort. These coatings are particularly suitable for application on items which require durability, resistance, and stability of the finishing coat. This makes them suitable to be used in offices, public buildings, and kitchen furniture.

Polyurethane varnishes can be found in a wide range of products used in the woodworking business as a high gloss or matte finish for closed or open pores. They are simply applied, and can also be used as a multi-layer coating.

PROPERTIES

- Easy Application (all traditional methods of spraying can be used)
- Excellent resistance to scratches, damage & chemicals
- Complete filling without fear of cracking
- Excellent transparency
- High solids content: 42%-65%
- Clear, colored and pigmented versions available
- Versatility
- Flexibility of coating
- Formaldehyde free

ADVANTAGES

- Can be applied to open pores until they are filled completely
- Prevents wear and scratches
- Wide range of colors in various shades and gloss levels
- It is possible to obtain deep, vivid colors and pure white
- High solids content means fewer coats of varnish necessary to be applied, and lower emissions of organic substances into the atmosphere.
- Smooth surface
- Varnished surfaces can be used for years without the need for repainting
